E-CLIP INSTALLATION and REMOVAL
(RTS System Applications)

The installation of the E-clips is as follows.

- Place one of the E-clips on top of the barrier at each hinge joint.
- After the clips are on the barrier, another person can then insert the clips into the tool. See picture below.

- The tool is used to hold the E-clips during the installation.
- Align the E-clip in the groove on the bottom of hinge pin and tap the end of the tool with your hand.
- The tool can now be pulled away leaving the E-clip attached to the hinge pin.
- With your hand spin the clip to insure that they are seated properly.

The picture below shows the final placement of the “E” clip installed on the pin.

NOTE:

Ensure that the E-clip is seated in groove properly or the pin will work its way out.

REMOVAL

- Turn center of E-clip toward the side of the barrier.
- Using standard pliers grab center of E-clip firmly and pull clip from pin.

NOTE

The E-clips are reusable, store in a dry location.
