**BARRIER SERVICE DAMAGE EVALUATION**

Barriers that have been damaged in the chain must be replaced to preserve the structural integrity of the wall and to prevent damage to the machine. A barrier is deemed to be unsuitable if any of the following conditions exist.

- The barrier is damaged exposing any internal steel reinforcement.
- If more that 30 pounds of concrete is missing from any single area. A 30 pound piece would be about 7" x 7" x 7".
